

# Nature's Palette

Just like an artist's palette, containing many different colors of paint, nature has its own variety of colors that it shows off!

## Activity:

- 1) Cut out the blank artist's palette above
- 2) Use a glue stick to cover the whole surface
- 3) Walk around outside and collect small pieces of anything you see (grass, leaves, flowers, etc)
- 4) Glue your bits of nature's colors to create your own "nature's palette"
- 5) Try visiting different habitats to see the different colors that may be found in each.
- 6) Take a photo and send it in to us so we can show them all off on our website!
