## Answers

**A. Snowy Owl - 1**

As with many Arctic animals, their white coloration helps them blend in with the snowy background.

**B. Screech Owl - 3 and 1**

The arrangement and texture, as well as the color, of their feathers make them resemble tree bark.

**C. Deer - 1**

Many forest dwelling animals are brown to help them blend in to their habitat.

**D. Arctic Fox - 1**

Again, many Arctic animals have white coloration, helping them blend in with the snowy background.

**E. Leopard - 2**

The spots make their outline difficult to detect.

**F. Viceroy Butterfly - 4**

They closely resemble Monarch Butterflies, which are unappetizing.

**G. American Toad - 2 and 1**

They have spots and their coloration resembles their habitat.

**H. King Snake - 4**

Their coloration mimics that of the deadly coral snake.

**I. Walking Stick - 3**

These insects have the appearance of a twig or stick.
